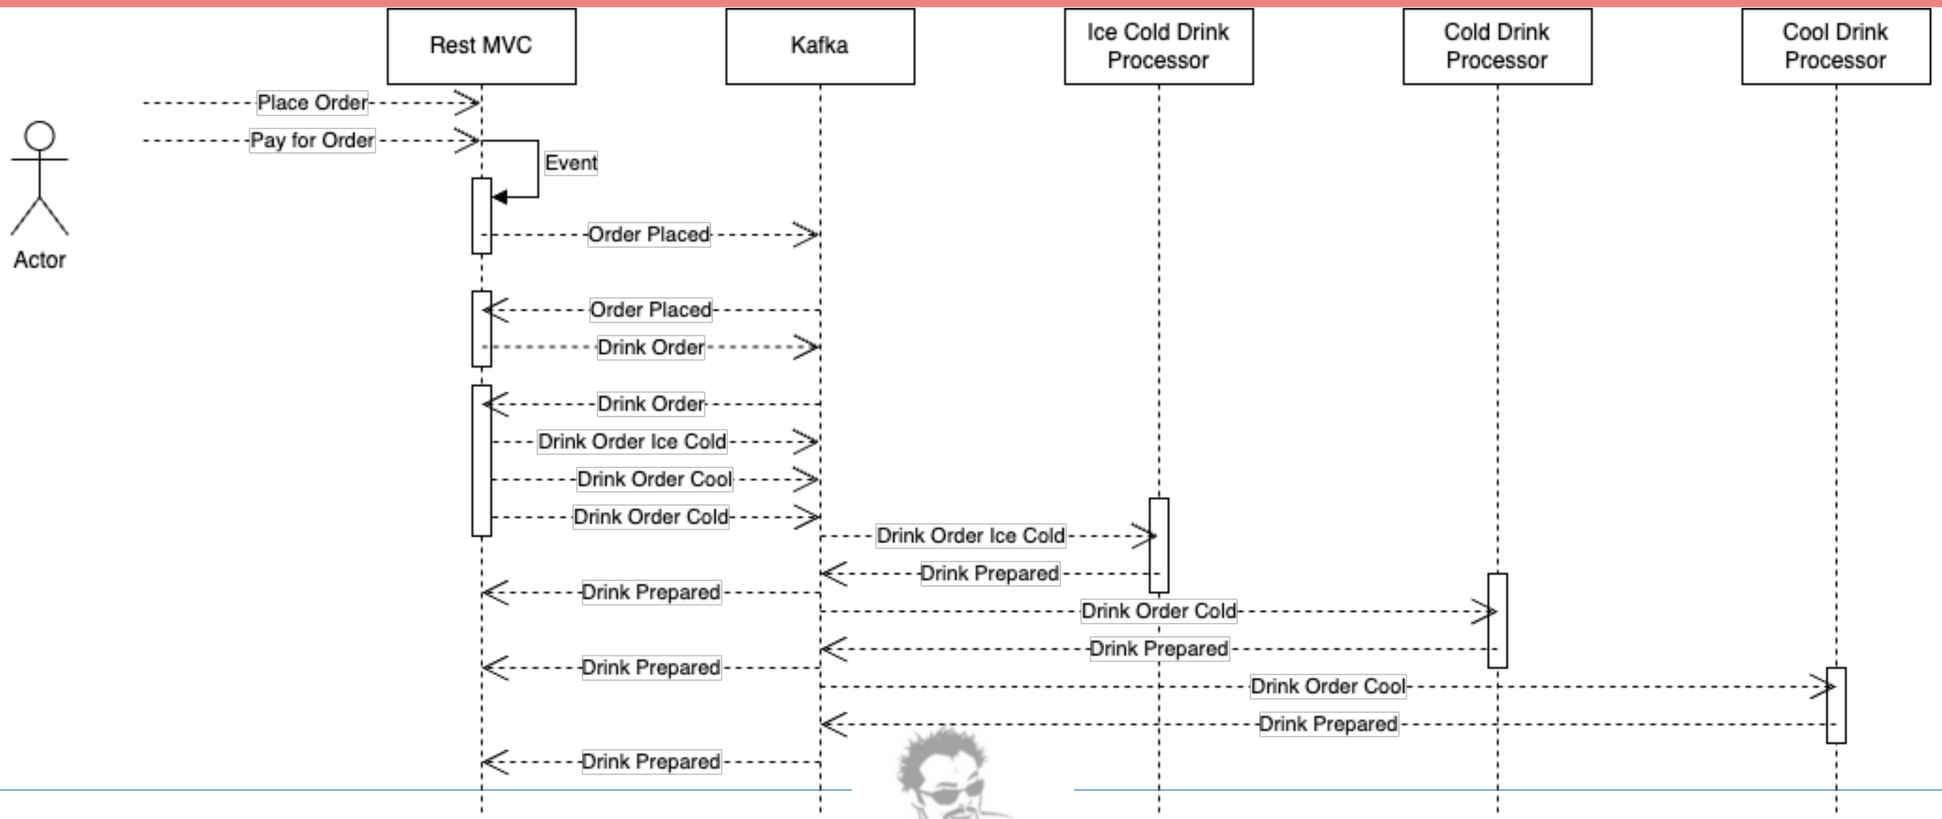
Spring Framework 6

Beginner to Guru

Assignment - Create Kafka Microservices

Sequence Diagram



SPRING FRAMEWORK GURU 2024

Assignment Create Microservices

- Create the 3 microservices required for our project
- For each microservice:
  - Configure Kafka
  - Create Listener for DrinkRequestEvent
  - Create Service to “process” DrinkRequestEvent
  - Create producer to publish DrinkPreparedEvent back to Kafka topic
    - Use topic “drink.prepared”

Assignment Create Microservices

- Create Test to send DrinkRequest to Kafka and verify receipt of message on “drink.prepared” topic
- Repeat this for all 3 services
- Coming up in the course we will create an integration test for all three services
- NOTE: We could create one service with an environment property for the topic to read from
  - ie - so one service could be configured for all 3 topics
  - We are going through the exercise of mimicking the development of real world microservices, thus need 3 independent projects
